NST Program Secretary

Ms. Flora Wu

lhwu@phys.sinica.edu.tw

Credits: 3

**Classroom: P101 Meeting Room,
Institute of Physics, Academia Sinica**

Class hour: Tuesday, 9:10-12:00

Course Objectives:

This course intends to equip students with some basic understanding about the current research in condensed matter physics. From the fundamental to more sophisticated phenomena, it covers a wide scope with emphasis on more conceptual building than the rigorous formulation. Students are required to have some quantum mechanics and statistical physics background, in order to digest the comprehensive content of this subject and appreciate its profound implication in today's technological applications.

Textbooks

- 1) *Introduction to Solid State Physics, Charles Kittel, the 8th edition (2005)*
- 2) *Condensed Matter Physics, Michael P. Marder (2000)*
- 3) *Solid-State Physics, James Patterson and Bernard Bailey, the 2nd edition (2010)*
- 4) *Solid-State Physics, Harald Ibach and Hans Luth, the 4th edition (2009)*

Course Syllabus

Week 01	(09/06)	Introduction and General Guidelines
Week 02	(09/13)	Crystal Symmetries and Bindings
Week 03	(09/20)	Reciprocal Lattice and Diffraction
Week 04	(09/27)	Electrons in Periodic Potentials
Week 05	(10/04)	Calculations of Energy Bands
Week 06	(10/11)	Dynamics of Bloch Electrons
Week 07	(10/18)	Lattice Vibrations and Elasticity
Week 08	(10/25)	Midterm Written Exam (50%)
Week 09	(11/01)	Transport Phenomena
Week 10	(11/08)	Semiconductors
Week 11	(11/15)	Semiconductor Devices
Week 12	(11/22)	Superconductivity
Week 13	(11/29)	Magnons and Magnetic Resonance
Week 14	(12/06)	Dielectrics and Ferroelectric
Week 15	(12/13)	Optical Properties of Solids
Week 16	(12/20)	Final Written Exam (50%)

Fundamentals

Crystal Symmetries and Bindings

Reciprocal Lattice and Diffraction

Electrons in Periodic Potentials

Calculations of Energy Bands

Lattice Vibrations and Elasticity

Dynamics of Bloch Electrons

Transport Phenomena

Applications

Semiconductors

Semiconductor Devices

Superconductivity

Magnons and Magnetic Resonance

Dielectrics and Ferroelectric

Optical Properties of Solids

Grading

Midterm Written Exam (50%)

Final Written Exam (50%)

**The problems in the exams will mainly be taken
from the exercises of the textbooks**
