My Working Experience with Hai-Yang at AS

蔡俊謙 Chun-Khiang Chua CYCU

How Things were Started

- I went to AS in Aug. 2003 and leave in July 2006
- Hai-Yang was my host
- We published 11 PRD papers in that period

Our Research Topics

- Covariant LFQM:
 - B decay FF (P-wave [with CW Hwang], K*γ, 2004)
 - Pentaquark (2 papers [1 with CW Hwang], 2004)
- FSI (2 papers, with Soni, 2005)
- 3 body B decays (with Soni, 2005)
- QCDF, B to Scalar mesons (with KC Yang, 2005)
- Charm hadrons in B decays (ccq baryon [with SY Tsai], meson, 2006)
- Scalar Glueball (with KF Liu, 2006)
- Some are well cited, one 250+, four 100+, two 50+ papers

Routine Schedule

- I arrived at AS around 9 or 10 am (HY arrived much earlier 7 am?)
- I went to Hai-Yang office
- Reported or discussed on new finding, progress, questions, topics...
- Back to my office and started working
- Hai-Yang gave me a ride leaving around 5:40 pm, we discuss a lot of things during the rides
- The was my schedule from Mon-Friday (Hai-Yang +Saturday)

Summer Break

- Hai-Yang leaves Taiwan every summer.
- Summer Break!
- No! In fact...
- Hai-Yang worked on the other side of the globe and I worked on this side
- We worked literally around the clock
- It was Summer No Break

Selecting Topics/Scopes

- Hai-Yang pays close attention to new experimental results
- Hai-Yang pays close attention to new devolopments
- Cover as much results as possible
- We discussed topics together
- Some topics were solely initiated by him
- He didn't force me to accept/ work on his topics

A good Listener

- We don't always agree with each other
- He respected my opinion even if he didn't agree
- I remember that we had different results on a problem
- The next day I reported and tried to clarify my point to him, he listened patiently behind his desk with a smile in his eyes
- After I finished my explanation, he told me that his result actually agreed with mine
- I was unable to see that. Probably because my focus was on conveying my point rather than on understanding his
- He is a better listener that me (see how good you are, especially when someone does not agree with you)

Sharing Labors

- Hai-Yang wrote his own computer codes
- Hai-Yang made drafts at the early stages
- I mostly wrote the parts that I worked on
- He really shared labors/ the hard works, sometime even a large part of it
- I think he is a rather unique example
- He really enjoys "doing" physics

A Visitor

- We once collaborated with a visitor (a senior faculty) at AS (he wanted to join our project)
- The visitor asked for my note, my code and I gave them to him...
- He then asked me to write the paper and I though...
- It is enough !"
- I complained it to Hai-Yang
- He strongly disagreed with it and handled it immediately
- At the end we didn't finish that paper
- This is probably a rather unique counter example, the other extreme. HY at the very right end...

Sharing Credits

- I was the corresponding author of most of our works
- Hai-Yang is very supportive
- For example, he shared his slides with me that consisted a large part of my talk at ICFP 2005
- I think most junior colleagues worked with him agree that he is very generous to junior people

Sharing Experience

- I was doing my job search at the end of that period, sometime it can be very disappointing
- Hai-Yang taught me to overcome the depression by concentrating on Physics
- I saw him did that at his difficult time
- I suddenly realized that Physics is his refuge

To Conclude the Working Experience

- It was a fruitful collaboration
- It is an enjoyable working experience
- Because...

+ Hai-Yang is a very Good Boss!

• He has set a very Good Example!

Thank You!
