

# **Exploring the Universe from the International Space Station**

Shih-Chang Lee

Institute of Physics, Academia Sinica

National Tsing Hua University

National Central University

I will first introduce particle physics research and explain to you the fundamental laws of nature as we know it today. Then I will tell you why experiments in particle physics usually generate big data and how we deal with it by distributed computing. Finally I will introduce Alpha Magnetic Spectrometer experiment as an example of carrying out precision particle physics research in space.
