

## **Accelerating Biodiversity Extinction from Climate Change**

**Chia-Wei Li**

Department of Life Science, National Tsing Hua University

---

With a current population of 7.3 billion, an ecological crisis triggered by a super-greenhouse appears imminent. As the outlook on climate change remains pessimistic, conservation efforts to prevent the decline of biodiversity needs to be stepped up. 15% of species have been driven away across the globe by human activity, and biodiversity has been fallen to unsustainable levels more than half of the world's surface. So how do we safeguard mother Earth? Restoring Nature could be the key to fighting climate change. Join Professor Li as he discusses a plan to overcome the challenges.
